

Lung cancer in England

1996 to 2004

A geographical profile of
mortality

Unit of Health Care Epidemiology,
Oxford University, and
South East England Public Health Observatory
2005

Lung cancer in England 1996 to 2004. A geographical profile of mortality.

**Authors: Michael Goldacre, David Yeates, Leicester Gill,
Myfanwy Griffith, Henry McGuinness, Daniel Meddings**

**Published by: Unit of Health-Care Epidemiology, Oxford University,
and South East England Public Health Observatory, 2005**

This document provides a geographical profile of mortality from cancer of the trachea, bronchus and lung in England. The geographical areas covered are the standard local authority areas of England. The period covered is January 1 1996 to December 31 2004. The data are analysed from mortality files supplied to the Public Health Observatories by the Office for National Statistics. This analysis includes mortality data about males and females of all ages.

The maps, charts and tables show both-sexes-combined and sex-specific results, including standardised mortality ratios (SMRs). The first set provides the data for males and females combined, the second for males, and the third for females.

Within each set, the data in the map are shown as quintiles of local authorities, with the one-fifth of local authorities with the lowest SMRs shown in the lightest colour and the one-fifth of local authorities with the highest SMRs shown in the darkest colour.

The error-bar chart provides a plot of the values of the SMR for each local authority area. Each vertical line represents one local authority area. It shows the point estimate for the SMR for the area with its 95% confidence interval. At a glance, the error-bar charts show the spread of SMRs across England and the extent to which variation across the country is statistically significant.

The scatter-plot shows the SMR for each local authority area plotted against the local authorities' score for the Index of Multiple Deprivation (IMD 2004).

Within each set, the first table shows the individual values of SMRs for each local authority, with the local authorities ranked in alphabetical order. For each local authority, the information in the table provides data about mortality showing the observed number of people who died (Obs.); the expected number (Exp.), obtained by applying national age-sex-specific rates to the age-sex distribution of the local authority population; and the SMR, calculated by indirect standardisation, with the 95% lower and upper confidence limits for the rate. The first part of the first table shows SMRs for the disease as the underlying cause of death. The second part shows SMRs for the disease as any mention.

The second table shows the local authority areas ranked according to the value of the SMR (ranked from lowest to highest ratio) for the disease as the underlying cause.

The third table shows the local authority areas ranked according to the value of the SMR (ranked from lowest to highest ratio) for mentions.

Some technical notes:

- Dataset used: UHCE-built file from SEPHO, template 6
- Diagnosis codes used: ICD9 162; ICD10 C33, C34
- Diagnosis position: underlying cause; and 'all mentions'
- Period covered: deaths from 1.1.1996 to 31.12.2004
- Age/sex restriction: all ages, both sexes
- Place of residence at time of death: England

We are very grateful for technical and clerical support from Susan Flynn and for statistical advice from Valerie Seagroatt. David Yeates, Leicester Gill, Myfanwy Griffith, Susan Flynn and Valerie Seagroatt are funded by the NHS National Centre for Research Capacity Development. Henry McGuinness and Daniel Meddings are funded by the South East England Public Health Observatory.
